i

Based on the IMP (Impact Management Project) framework, this service provides a solution for impact-oriented organizations to self-disclose their social value creation performance.

You can measure and disclose performance at both the organizational solution level and individual project levels. Currently, the service supports reporting for one type of social value creation, and the disclosure period is limited to a single fiscal year.

How to Use

Upload corporate documents (IR, company profiles, business plans, etc.), and the AI will automatically generate drafts for core sections, from '③ Basic Information' to '⑥ Outcome Indicator and Data.' Users can then finalize the report by completing the remaining details based on the AI-powered draft.

☐ I have read and understood the service instructions.

 **Public data suggestion**
This service is in beta, and the public data provided may contain some inaccuracies.

Suggested value

Review required

39 USD per metric tonne of CO2

Base year 2024 · Source NBER Working Paper Series

Calculation basis

Used the 2024 value from Stated Preference Estimates of the Average Social Cost of Carbon as a baseline candidate (unit: USD per metric tonne of CO2). Match rationale: This is explicitly reported as a global average social cost of carbon estimate in a 2024 research paper. It monetizes the environmental damage associated with carbon emissions and matches the requested Earth-wide stakeholder geography..

⚠ **Check required:** This is a per-tonne valuation factor, not a total annual cost. · It cannot represent the baseline total without 2024 emissions data for the specific virgin or existing material replaced. · The estimate is expressed as a global average willingness-to-pay-based social cost of carbon; it is not a material life-cycle emission factor. · The source reports CO2, not CO2-equivalent for all greenhouse gases. · The indicator, population, geography, year, or unit match is weak and requires review.

8. Key Factors in Disclosure Analysis

 Writing Guide

1. Please describe the risk content for each item in detail.
2. After writing, be sure to click the [Analyze Risk Level] button in the upper right.
3. Based on the text you entered, the AI will calculate a risk rating (Low / Medium / High).

8-1. Evidence Risk

Analyze Risk Level

Please describe risk factors related to the accuracy and reliability of the disclosure data.

Check Risk Levels

Once you finish writing, click the [Analyze] button.
AI will evaluate the content to analyze the risk level.

8-2. External Risk

Analyze Risk Level

Please describe risk factors arising from external factors or environmental shifts.
